

# ALUFIX

## Hinge for outward opening wood aluminium systems

**ALUFIX** is an innovative surface mounted hinge for Wood-Aluminium systems. It is **applied on the wood** instead than on the aluminium cover.

**FUNCTIONAL:** it makes it possible to remove the profile without having to remove the hinges from the window.

**DISCREET:** thanks to the application to the wood, the straps are completely hidden by the outer aluminium profile and only the central body of the hinge is visible.

**MULTICOLOURED:** covers with different finishes can be applied to the hinge body, which is the only visible part. Available in aluminium and brass (for wood bronze systems).

**ADJUSTABLE:** in height thanks to the Allen head screw placed on the base of the hinge body which make it possible to vary the height up to 6 mm.

**STRONG:** thanks to screws (up to 8) and 4 threaded pins  $\varnothing 8 \times 25$  ALUFIX offers a significant loading capacity. Stainless steel pin.

**SELF-JIGGING:** it is extremely easy to apply and does not need any milling.

# ASSEMBLING HAS NEVER BEEN SO QUICK!

**1** Hinge alignment.

**2** Fixing by using  $\varnothing 4,5$  mm screws

**3** Drilling + fixing supporting pins.

**4** Insertion of the male part + fixing through screws and pins.

**5** Application of aluminium profiles through a clip + covers insertion

**ALUFIX**

Material	Article	Type
Steel	E01125.20.XX	r.h.
	E01126.20.XX	l.h.
