

Composit

Adjustable hinges for composite and PVC systems

- For profiles with axis 9, 12, 26 mm
- Three-dimensional adjustment
- The stainless steel pivot

COMPOSIT - Adjustable hinges for composite and PVC systems

Three-dimensional adjustment by using an Allen key.

Jigs that can be adapted to all profiles are available, for quick and accurate hinge fitting.

ABS cover kits available in different finishes.

6 mm vertical adjustment. The thrust is applied through two hardened steel pivots and one brass bush, ensuring easy adjustment of any sash, including heavy ones. The adjustment is extremely stable since it bears no relation with the hinge rotation. Adjustment can be performed also after installing the sash and frame.
